Data Miner 2   Hourly Load: Metered

Hourly Load: Metered

This feed summarizes the MW-hour net energy for load as consumed by the service territories within the PJM RTO. Data is supplied by the respective electric distribution companies within PJM, and represents the best quality level of metered load within their zones. This data contains company submitted values or PJM generated estimated values substituted where company data is unavailable. The Company Verified flag indicates whether the value has been verified by the electric distribution company. There will be a lag in updated data availability due to wait time for possible corrections. Data adjustments can occur up to 90 days after the actual date. The mapping representation between Control Areas, NERC Regions, Market Regions, Zones and Load Areas from the legacy posting is available here:https://pjm.com/-/media/etools/data-miner-2/hourly-loads-area-mapping.ashx?la=en. This reference document is for informational purposes only and will not be updated.

Data Fields

Field name	Data type	Description
Datetime Beginning UTC	DateTime	Datetime Beginning UTC
Datetime Beginning EPT	DateTime	Datetime Beginning EPT
NERC Region	String	NERC Region
Market Region	String	Market Region
Transmission Zone	String	Transmission Zone Location
Load Area	String	Fully Metered Electric Distribution Company
MW	Number	Load in MW
Company Verified	Boolean	Indicates whether the metered load has been verified by the Electric Distribution Company
